

Biological Activity

Step 1 : Collagen type-1

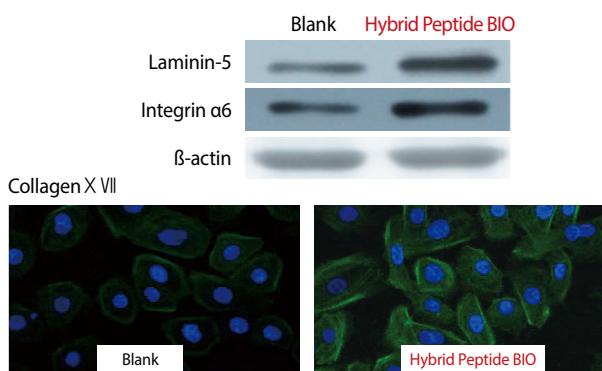

Hybrid Peptide BIO increases expression of collagen type1 in 3D artificial skin model.

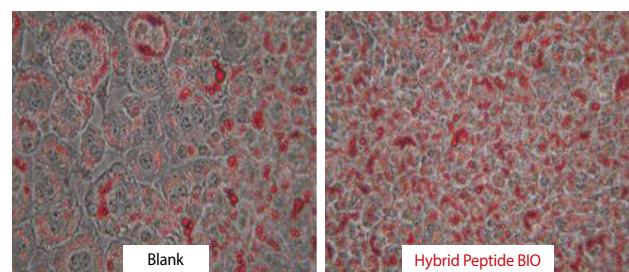

Hybrid Peptide BIO prevents keratinocyte-mediated reduction of collagen synthesis

Step2 : Cell-to-cell communication

Hybrid Peptide BIO increases expression of collagen XVII, laminin-5, and integrin α-6 in keratinocyte cells

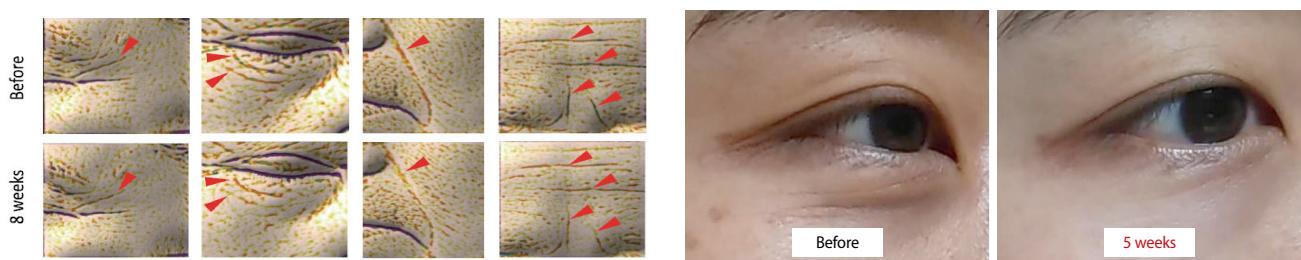

Step3 : Adipogenesis

Hybrid Peptide BIO enhances formation of lipid droplet in activated pre-adipocyte cells

Clinical Efficacy

Wrinkle Reduction

Hybrid Peptide BIO containing formulation reduces 4 kinds of fine wrinkle effectively

PCPC/INCI Name

- Biotin, Hexapeptide-2

Composition

- Hybrid Peptide BIO, 1,2-Hexanediol, Water

Patent No KP 10-1667383, US 9,180,082, EP 2666780, JP 6014240

Recommended Dosage

- 1~5% for cream and essence
- 0.01~0.1% for masksheet

Application

- anti-wrinkle anti-ageing

Hybrid Peptide BIO

Three Step Wrinkle Reduction

- 01 **Collagen** Increases
 - 02 **DEJ** Enhance
 - 03 **Adipogenesis** Increases
- Use 1 ingredient
Get 3 effects

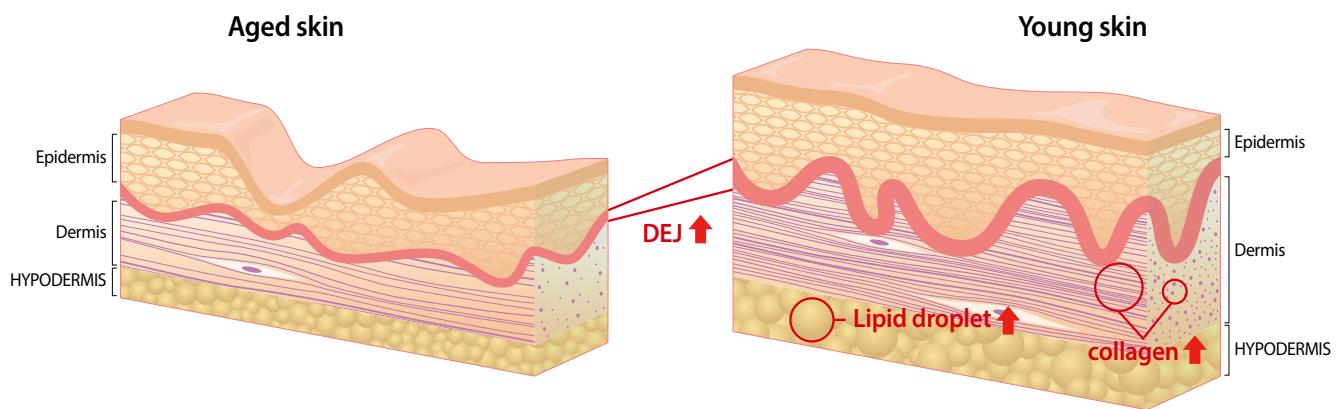

Description

Hybrid Peptide BIO effectively reduces fine wrinkle through stimulation of the **cell-to-cell communication** in the keratinocyte cells (Epidermis), **collagen production** in the fibroblast cells (Dermis), **adipogenesis** in the pre-adipocyte cells (Hypodermis).

- Weaken of DEJ
- Loss of collagen
- Reduce of adipogenesis

Hybrid Peptide
BIO

- Strengthen of DEJ
- Increase of collagen
- Increase of adipogenesis

*DEJ : Dermal-epidermal junction
